

# Adult Numeracy Center

Creating engaging mathematics learning experiences has long been a focus of TERC's work. Numeracy, the ability to manage the quantitative demands of a situation, to solve problems in real contexts, is at the heart of much that adults need to do. The Adult Numeracy Center at TERC helps adults and young adults understand how math is present and relevant in everyday life, and how they can use this knowledge to improve their lives and communities.

The National Research Council's definition of math proficiency guides our work with learners, teachers, directors, and professional development providers. Together with state and city partners we build capacity to offer high quality math instruction in adult learning centers, schools, community colleges, and informal settings. We work in concert with informal educators such as environmental organizers to design materials that foster science and math learning.
