Recruiting Teachers for Data Analysis, Statistics Seminar

May 6, 2003

The VISOR (Visualizing Statistical Relationships) project is looking for Boston-area middle and high school math teachers for a one-year biweekly seminar on data analysis and statistical reasoning. Participants will analyze data themselves and with their students, and reflect on the statistical reasoning happening in each context. The seminar will use two newly developed software tools for statistics education; participants need to have access to computer resources in their schools. Teachers are paid a \$2000 stipend.
