

Activity 2: Number of the Day

The number for today:

On the lines write as many **expressions** as you can whose answers equal the number for today. Use a mix of math operations and symbols.

An **expression** is a math phrase with numbers, symbols, and operators (such as + and \times) grouped together; they are another way to name or show the value of something.

For example, $7 + 4 - 1$ is another way to show 10.
